

Vanguard Funds

Supplement Dated August 6, 2026, to the Prospectuses and Summary Prospectuses

Effective today, one or more new portfolio managers have been added as co-portfolio managers of each Fund listed in the table below (each, an “impacted Fund,” and collectively, the “impacted Funds”). With the exception of Vanguard Municipal Low Duration Fund, these portfolio managers replace Justin Schwartz, who previously served as portfolio manager or co-portfolio manager, and will now lead Vanguard’s Municipal Bond Group.

Accordingly, all references to Mr. Schwartz have been removed from the corresponding impacted Funds’ Prospectuses and Summary Prospectuses. The impacted Funds’ investment objectives, strategies, and policies remain unchanged.

Impacted Fund	Portfolio Manager(s)
Vanguard Intermediate-Term Tax-Exempt Bond ETF	John P. Grimes and Stephen Lombardelli
Vanguard Tax-Exempt Bond Index Fund	John P. Grimes and Stephen Lombardelli
Vanguard Long-Term Tax-Exempt Bond ETF	John P. Grimes and Stephen Lombardelli
Vanguard Municipal Money Market Fund	Michael Davis
Vanguard New York Tax-Exempt Bond ETF	John P. Grimes and Stephen Lombardelli
Vanguard California Tax-Exempt Bond ETF	John P. Grimes and Stephen Lombardelli
Vanguard Short-Term Tax-Exempt Bond ETF	John P. Grimes and Stephen Lombardelli
Vanguard Municipal Low Duration Fund	Michael Davis

Prospectus and Summary Prospectus Text Changes

The following is added under the heading “Investment Advisor” in the **Fund Summary** section for each impacted Fund, as appropriate:

John P. Grimes, CFA, Portfolio Manager at Vanguard Capital Management (VCM). He has co-managed the Fund since August 2026.

Stephen Lombardelli, CFA, Portfolio Manager at VCM. He has co-managed the Fund since August 2026.

Michael Davis, CFA, Portfolio Manager at VCM. He has co-managed the Fund since August 2026.

Prospectus Text Changes

The following is added under the heading “Investment Advisor” in the **More on the Fund(s)** section for each impacted Fund, as appropriate:

John P. Grimes, CFA, Portfolio Manager at VCM. He has been with Vanguard since 1998, has worked in investment management since 2008, has managed investment portfolios since 2017, and has co-managed the Fund since August 2026. Education: B.A., Marquette University; M.B.A., Saint Joseph’s University.

Stephen Lombardelli, CFA, Portfolio Manager at VCM. He has been with Vanguard since 2012, has worked in investment management since 2015, has managed investment portfolios since 2026, and has co-managed the Fund since August 2026. Education: B.S. and M.B.A from Drexel University.

Michael Davis, CFA, Portfolio Manager at VCM. He has been with Vanguard since 2009, has worked in investment management since 2012, has managed investment portfolios since 2026, and has co-managed the Fund since August 2026. Education: B.S., Villanova University.

Fund Summary

Investment Objective

Vanguard New York Tax-Exempt Bond ETF (the “Fund”) seeks to track the performance of a benchmark index that measures the investment-grade segment of the New York municipal bond market. The Fund is intended for New York residents only.

Fees and Expenses

The following tables describe the fees and expenses you may pay if you buy, hold, and sell shares of the Fund. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and example below.**

Shareholder Fees

(Fees paid directly from your investment)

Transaction Fee on Purchases and Sales	None*
Transaction Fee on Reinvested Dividends	None*

* None through Vanguard (Broker fees vary)

Annual Fund Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.09%
12b-1 Distribution Fee	None
Other Expenses	0.00%
Total Annual Fund Operating Expenses ¹	0.09%

1 The expense information shown in the table reflects estimated amounts for the current fiscal year.

Example

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same.

1 Year	3 Years	5 Years	10 Years
\$9	\$29	\$51	\$115

This example does not include the brokerage commissions that you may pay to buy and sell shares of the Fund.

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. During the fiscal period from May 20, 2025, to November 30, 2025, the Fund’s portfolio turnover rate was 6% of the average value of its portfolio.

Principal Investment Strategies

The Fund employs an indexing approach designed to track the performance of the S&P New York AMT-Free Municipal USD10 Million Par Bond Index (the “Target Index”), which measures the performance of the investment-grade segment of the New York municipal bond market as determined by the index provider. The Target Index includes municipal bonds issued in the state of New York, primarily those issued by New York state or local governments or agencies whose interest payments are exempt from U.S. federal income taxes (including the federal alternative minimum tax (AMT)) and New York state income taxes. Under normal circumstances, the Fund invests at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in the bonds that make up the Target Index. The Fund also has a fundamental policy to, under normal circumstances, invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in securities whose income is exempt from federal income taxes, including the federal AMT, and New York state income taxes.

The Fund invests by sampling the Target Index, meaning that it holds a range of securities that, in the aggregate, approximates the full Target Index in terms of key risk factors and other characteristics. The Fund seeks to maintain a dollar-weighted average maturity consistent with that of the Target Index. As of

November 30, 2025, the dollar-weighted average maturity of the Target Index was 13.9 years.

The Fund is considered nondiversified, as defined under the Investment Company Act of 1940, which means that it may invest a greater percentage of its assets in the securities of particular issuers as compared with diversified funds.

Principal Risks

As with any investment, an investment in the Fund could lose money over any time period. The Fund's share price and total return may fluctuate, potentially within a wide range. The principal risks of investing in the Fund are summarized below. Each of the following risks could affect the Fund's performance:

- **General Market Risk.** The markets in which the Fund invests can be affected by a variety of factors. These factors, which can be real or perceived, may include economic, market, political, and regulatory conditions and developments as well as local, regional, or global events such as wars, military conflicts, natural disasters, and public health issues. In addition, investor sentiment and expectations regarding these factors can also impact the markets. Different parts of the market, including different industries and sectors as well as different types of securities, may react differently to factors that affect the market. These factors can contribute to market uncertainty, market volatility, and fluctuations in the value of the Fund's investments, thereby resulting in potential losses to the Fund over short or long periods.
- **Investing in Bond Markets.** The Fund may be impacted by the general condition of the bond markets and by factors that affect bonds and bond issuers. For example, as a general rule, bond prices and interest rates move in opposite directions. When interest rates rise, bond prices tend to fall, and when interest rates fall, bond prices tend to go up. Bond income also is affected by changes in interest rates. Interest rates can rise or fall for a number of reasons, including, but not limited to, central bank monetary policy, inflationary or deflationary pressures, and changes in general market and economic conditions. Changing interest rates, including, but not limited to, rates that fall below zero, could have unpredictable effects on the overall market and may expose the bond markets in particular to heightened volatility and potential illiquidity. The degree to which the Fund is impacted by certain bond market risks may vary based on factors disclosed in its principal investment strategies, such as the types of bonds in which it invests and the overall credit quality, average maturity, and/or average duration of its bond holdings.
- **Investing in the Municipal Bond Market.** In addition to the general risks associated with investing in bonds, municipal bonds are subject to unique risks. The values of the Fund's municipal bond holdings could be impacted significantly by economic, regulatory, political, or other developments or

circumstances affecting municipal bond issuers. These developments or circumstances could create uncertainty in the municipal bond market and/or adversely impact the ability of municipal bond issuers to make principal and interest payments, which could result in a loss to the Fund. Municipal bonds can vary from one another in a number of ways, which can impact their sensitivity to certain risks. For example, investing in revenue bonds, which make up a significant portion of the municipal bond market, will generally subject the Fund to a higher risk of loss than investing in municipal bonds secured by the full faith, credit, and taxing power of the issuer (general obligation bonds). Because the interest and principal on revenue bonds is payable only from a particular stream of revenue, they generally carry more **Credit Risk** than general obligation bonds. Revenue bonds also tend to be more sensitive to economic conditions than general obligation bonds, which could make their prices more volatile. The Fund also is subject to the risk that all or a significant portion of its municipal bond holdings will be affected in the same manner. Because many municipal bonds are issued to finance similar projects, conditions in related sectors could have an outsized impact on the municipal bond market. As a result, the Fund may underperform funds that invest more broadly.

- **Tax-Exempt Income Risk.** There is no guarantee that the interest payable on municipal bonds will remain exempt from federal, state, or local income taxes. Tax-exempt income from the Fund's municipal bond holdings could be declared taxable, possibly with retroactive effect, due to a variety of circumstances such as tax law changes, adverse interpretations by tax authorities, or noncompliant conduct by a municipal bond issuer. Any of these circumstances could cause the prices of municipal bonds to decline significantly or impair the Fund's ability to achieve its investment objective.
- **Interest Rate Risk.** During periods of rising interest rates, bond prices overall may decline, which could result in a decline in the Fund's value. The prices of longer-term bonds are more sensitive to changes in interest rates than the prices of shorter-term bonds.
- **Income Risk.** During periods of falling interest rates, the Fund's income may decline. The income paid by shorter-term bonds is subject to a higher degree of fluctuation than the income paid by longer-term bonds.
- **Credit Risk.** Credit risk refers to the chance that an issuer will default (fail to meet its credit obligations) or fail to make payments in a timely manner, which could result in a loss to the Fund. In addition, negative perceptions of an issuer's ability to make payments can cause the price of a security to decline. While all debt securities are subject to credit risk to some extent, those with higher credit quality ratings generally pose less credit risk than those with lower credit quality ratings.
- **Municipal Bond Liquidity Risk.** Limited trading in the municipal bond market and a relative lack of publicly available information about the financial condition of municipal bond issuers may make municipal bonds more difficult

to value or sell than other types of debt securities. If the Fund is unable to sell a security at an advantageous time or price, its returns may be reduced.

- **Call Risk.** Certain bonds held by the Fund may be callable. The issuer of a callable bond has the right to “call” (redeem) the bond before its maturity date. Calls on bonds held by the Fund would result in the Fund losing any price appreciation above the bond’s call price. In addition, because bond calls occur more frequently during periods of falling interest rates, the Fund likely would be forced to reinvest the proceeds of any called bonds at a lower interest rate than that of the called bonds, resulting in a decline in the Fund’s income and a potential loss in the value of the Fund’s investments. If the proceeds from a called bond generate taxable income, the Fund may need to distribute income subject to federal or New York personal income tax or to the federal alternative minimum tax. Frequent bond calls and subsequent reinvestments of the proceeds also would increase the Fund’s turnover rate.
- **Extension Risk.** During periods of rising interest rates, certain bonds held by the Fund may be paid off substantially more slowly than originally anticipated. As a result, the value of the bonds may fall, resulting in a decline in the Fund’s income and a potential loss in the value of the Fund’s investments.
- **State-Specific Focus.** The Fund invests primarily in securities issued by New York and its municipalities. Any adverse tax, legislative, or political developments in New York may have far-reaching impacts on the overall New York municipal bond market, which could adversely affect the Fund’s holdings and/or the securities that are available for investment by the Fund. In addition, the Fund is more susceptible to the credit risk of and unfavorable developments in New York than a fund that invests more widely. Unfavorable developments in any economic sector may have far-reaching ramifications on the overall New York municipal bond market.
- **Index Investing.** The Fund is subject to risks associated with index investing. Because the Fund generally seeks to track the performance of the Target Index regardless of how the Target Index is performing, the Fund’s performance may be lower than it would be if it were actively managed. Additionally, because the Fund does not hold all of the securities included in the Target Index, it is subject to the risk that the representative sample of securities selected by the advisor will, in the aggregate, vary from the investment profile of the full Target Index. The performance of the Fund’s investments, in the aggregate, may not match the investment performance of the Target Index. This risk, known as tracking error risk, may be heightened during times of increased market volatility or under other unusual market conditions. The Fund also could be negatively impacted by changes to the Target Index made by the index provider or by errors made by the index provider. Any gains, losses, or costs associated with or resulting from an error made by the index provider will generally be borne by the Fund and, as a result, the Fund’s shareholders.

- ***Nondiversified Funds.*** The Fund is considered a nondiversified fund as defined under the Investment Company Act of 1940. Nondiversified funds invest a greater percentage of their assets in a small number of issuers than diversified funds, their performance may be negatively impacted by relatively few securities or even a single security, and their shares may experience significant fluctuations in value.
- ***ETF Share Trading.*** The Fund's ETF shares are listed for trading on Cboe BZX Exchange, Inc. and individual investors may only buy and sell them on the secondary market at market prices. Although it is expected that the market price of an ETF share typically will approximate its net asset value (NAV), there may be times when the market price of an ETF share and its NAV differ significantly. Disruptions to creation and redemption transactions, the existence of significant market volatility, or potential lack of an active trading market for ETF shares (including through a trading halt), as well as other factors, may result in ETF shares trading significantly above (at a premium) or below (at a discount) the Fund's NAV or the intraday value of the Fund's holdings. Thus, you may pay more or less than NAV when you buy ETF shares on the secondary market, and you may receive more or less than NAV when you sell those shares.
- ***Authorized Participants.*** Only Authorized Participants may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of financial institutions that may act as Authorized Participants. The Fund's Authorized Participants are not obligated to engage in creation or redemption transactions. To the extent that the Fund's Authorized Participants are unable to or choose not to proceed with creation and/or redemption transactions with respect to the Fund and no other Authorized Participants step forward to engage in creation or redemption transactions with the Fund, the Fund's ETF shares may trade at a discount to NAV and possibly face trading halts and/or delisting.

An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.

Annual Total Returns

The Fund has not been in operation long enough to report a full calendar-year return. Performance information is available on our website at vanguard.com/performance.

Investment Advisor

The Vanguard Group, Inc. (Vanguard) through its wholly owned subsidiary, Vanguard Capital Management (VCM). VCM exercises portfolio management responsibilities for the Fund.

Portfolio Manager

Justin A. Schwartz, CFA, Principal of Vanguard and Portfolio Manager at VCM. He has managed the Fund since its inception in 2025.

Purchase and Sale of Fund Shares

ETF shares may only be bought and sold in the secondary market through a brokerage firm. The price you pay or receive for ETF shares will be the prevailing market price, which may be more (premium) or less (discount) than the NAV of the shares. The brokerage firm may charge you a commission to execute the transaction. Unless imposed by your brokerage firm, there is no minimum dollar amount you must invest and no minimum number of shares you must buy. ETF shares cannot be directly purchased from or redeemed with the Fund, except by certain authorized broker-dealers. These broker-dealers may purchase and redeem ETF shares only in large blocks known as creation units, typically in exchange for baskets of securities.

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase ETF shares (bid) and the lowest price a seller is willing to accept for ETF shares (ask) when buying or selling shares in the secondary market (bid-ask spread). Recent information, including information on the Fund's NAV, market price, premiums and discounts, and bid-ask spreads, is available online at [vanguard.com](https://www.vanguard.com).

Tax Information

The Fund's distributions, including any market discount recognized by the Fund's investments, may be taxable as ordinary income or capital gains. A majority of the income dividends that you receive from the Fund are expected to be exempt from federal and state income taxes. However, a portion of the Fund's distributions may be subject to federal, state, or local income taxes or to the federal alternative minimum tax. You should consult your own tax advisor with respect to any particular U.S. or non-U.S. tax consequences of your investment in the Fund.

Payments to Financial Intermediaries

The Fund and its advisor do not pay financial intermediaries for sales of Fund shares.

More on the Fund

This Prospectus provides information about Vanguard New York Tax-Exempt Bond ETF, an exchange-traded fund (the “Fund”). The Fund is a series of Vanguard New York Tax-Free Funds (the “Trust”). Unlike conventional mutual fund shares, ETF shares cannot be purchased directly from or redeemed directly with the issuing fund by an individual investor. Instead, only certain authorized broker-dealers (“Authorized Participants”) can purchase and redeem ETF shares directly from the issuing fund at net asset value. Authorized Participants may purchase and redeem ETF shares from the issuing fund only in large blocks (creation units), usually in exchange for baskets of securities. Funds may also issue and redeem creation units in exchange for solely cash or a combination of cash and securities. These trades may occur in-kind between Vanguard and the Authorized Participant. Individual investors can purchase ETF shares on the secondary market through a broker. Reading this Prospectus will help you decide whether the Fund’s ETF shares are the right investment for you.

As you consider an investment in the Fund’s ETF shares, you should take into account your tolerance for fluctuations in the securities markets. The costs of investing are another important consideration. As a Fund shareholder, you will pay a proportionate share of the costs of operating the Fund and any transaction costs incurred when the Fund buys or sells securities, including costs generated by shareholders of other share classes to the extent the Fund offers more than one share class. These costs can erode a substantial portion of the gross income or the capital appreciation the Fund achieves. Even seemingly small differences can, over time, have a dramatic effect on the Fund’s performance.

Who Should Invest in Tax-Exempt Funds?

Because yields on tax-exempt bonds (including some municipal bonds) are typically lower than those on taxable bonds, investing in a tax-exempt fund makes sense only if you stand to save more in taxes than you would earn as additional income while invested in a taxable fund.

To determine whether an investment in a tax-exempt fund makes sense for you, you can compute the tax-exempt fund's Taxable-Equivalent Yield. This figure enables you to take taxes into account when comparing your potential return on a tax-exempt fund with the potential return on a taxable fund. To compute it, calculate your combined tax bracket by adding up your state and federal marginal tax brackets. Then, divide the tax-exempt fund's yield by the difference between 100% and your combined tax bracket. For example, if you are in a 10.9% state tax bracket and a 37% tax bracket and subject to the 3.8% Net Investment Income tax, your combined tax bracket would be 51.7% (10.9% + 37% + 3.8%). Assuming you are considering a tax-exempt fund with a 4% yield, the Taxable-Equivalent Yield would be 8.28% (4% divided by (100% - 51.7%)).

In the above example, an investment in the tax-exempt fund may make sense for you if the tax-exempt fund's Taxable-Equivalent Yield of 8.28% were greater than the yield of a similar, though taxable, investment. Keep in mind that the example uses an assumed tax bracket. Make sure to verify your actual effective marginal rate before calculating Taxable-Equivalent Yields of your own.

Investment Objective and More on Principal Investment Strategies

In this section, you will find more information about the Fund's investment objective and the principal investment strategies and policies that the Fund uses in pursuit of its investment objective. The Trust's board of trustees (the "Board") oversees the Fund's management. The Board may approve changes to the Fund's strategies or policies in the interest of shareholders without shareholder approval unless the strategy or policy is designated as fundamental.

Investment Objective

The Fund seeks to track the performance of a benchmark index that measures the investment-grade segment of the New York municipal bond market. The Fund is intended for New York residents only.

The Fund's investment objective is not fundamental and may be changed without shareholder approval.

Implementation of Investment Objective

To achieve its investment objective, the Fund employs an indexing, or passive, investment approach designed to track the performance of its Target Index, the S&P New York AMT-Free Municipal USD10 Million Par Bond Index.

What are Index Funds?

Index funds attempt to track—not outperform—the performance of a specified market index. An index is a group of securities whose overall performance is used as a standard to measure the investment performance of a particular market. Some indexes represent entire markets, such as the U.S. stock market, while others cover a segment of a market, such as short-term bonds.

One cannot invest directly in an index. Instead, an index fund's advisor will typically seek to hold all, or substantially all, of the securities that make up the fund's target index (often referred to as “replicating” an index or a “full replication” approach) or a representative sample of the securities that make up a fund's target index (“sampling” an index).

Under normal circumstances, the Fund invests at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in the bonds that make up the Target Index. Investments in derivatives may be counted toward the Fund's 80% policy to the extent that they provide investment exposure to the securities included within the policy or to one or more market risk factors associated with such securities. The Fund may change this 80% policy only upon 60 days' notice to shareholders. The Fund also has a fundamental policy to, under normal circumstances, invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in securities whose income will be exempt from federal income taxes, including the federal AMT, and New York state income taxes. A fundamental policy may not be materially changed without shareholder approval.

The Fund is considered nondiversified, as defined under the Investment Company Act of 1940, which means that it may invest a greater percentage of its assets in the securities of particular issuers as compared with diversified funds. A fund becomes nondiversified if, with respect to 75% of its total assets, the fund: (1) purchases more than 10% of the outstanding voting securities of any one issuer, or (2) purchases securities of any issuer when, as a result, more than 5% of the fund's total assets are invested in that issuer's securities.

Security Selection

The Fund invests by sampling its Target Index. The advisor buys and sells securities for the Fund for the purpose of tracking the Target Index. Using quantitative and qualitative methods, the Fund's advisor generally selects a representative sample of securities that approximates the full Target Index in terms of key risk factors and other characteristics. These factors include duration, cash flow, credit quality, and callability of the underlying bonds. In addition, the Fund keeps industry sector and subsector exposure within tight boundaries relative to its Target Index. Because the Fund does not hold all of the securities included in the Target Index, some of the securities (and issuers) that are held will likely be overweighted (or underweighted) compared to the Target Index. The maximum overweight (or underweight) is constrained at the issuer level with the goal of producing well-diversified exposure in the portfolio.

The Fund seeks to minimize credit risk by purchasing a wide selection of the municipal securities included in the Target Index, which may make it less likely that the Fund will be hurt significantly by a particular bond issuer's failure to pay principal or interest.

The Target Index is a market value-weighted index designed to measure the performance of the investment-grade segment of the New York municipal bond market, as determined by the index provider. The Target Index includes municipal bonds issued in the state of New York, primarily those issued by New York state or local governments or agencies whose interest payments are exempt from U.S. federal income taxes (including the federal AMT) and New York state income taxes.

What is the Federal Alternative Minimum Tax?

The federal alternative minimum tax, or "AMT," is a tax system designed to ensure that every individual pays at least some federal income tax. It applies to a limited number of taxpayers who claim significant tax deductions and credits. Certain tax-exempt bonds whose proceeds are used to fund private, for-profit organizations may be considered "tax-preference items" for purposes of the federal AMT. Although income from bonds subject to the federal AMT is exempt from federal income tax, taxpayers may have to pay the federal AMT on the income from bonds that are considered "tax-preference items."

To be eligible for inclusion in the Target Index, a bond must have a rating of at least investment-grade as determined by a nationally recognized statistical rating organization. For the avoidance of doubt, the index provider will use the lowest rating in determining if a bond is investment-grade. Bonds eligible for inclusion in the Target Index also must meet certain other conditions determined

by the index provider, including, but not limited to, being denominated in the U.S. dollar, generally having a minimum par (i.e., currently outstanding face value) amount of \$10 million, and having a remaining term to final maturity that is greater than or equal to one calendar month.

The Target Index is reviewed and rebalanced on a monthly basis. Bonds are added to and removed from the Target Index in connection with the monthly rebalancing process. As of November 30, 2025, the number of bonds held by the Fund and the number of bonds included in the Target Index were 2,210 and 5,150, respectively.

The Target Index is owned, calculated, and controlled by the index provider in its sole discretion. Neither the advisor nor any of its affiliates has discretion to select Target Index components or change the Target Index's methodology.

Additional Information Regarding the Fund's Investments

The Fund's investments are described in more detail below.

What are Bonds?

Generally speaking, a **bond** represents a debt or loan issued by, for example, a corporation, a government, or a financial institution. In most instances, the issuer agrees to pay the bondholder a fixed, variable, or floating rate of interest for a specified length of time, and to repay the bond in full on a specified **maturity** date. The **income** earned by a bond (or its **yield**, when expressed as a percentage of the bond's price) can vary based on its **maturity**. Longer-term bonds tend to have higher yields than shorter-term bonds, but are more sensitive to fluctuations in value. By contrast, shorter-term bonds are less likely to fluctuate in value, but tend to have lower yields. A bond's **duration** is a measure of how sensitive its price is to changes in interest rates. For example, if a bond has a duration of 2 years, its price would fall by approximately 2% when interest rates rise by 1%. On the other hand, the bond's price would rise by approximately 2% when interest rates fall by 1%. A bond's **credit quality** rating is an assessment of the issuer's ability to make timely interest payments and repay the bond in full on its stated maturity date. The higher a bond's credit quality, the greater the perceived chance that the issuer will meet its payment obligations (and vice versa). Investment-grade bonds are those whose credit quality is considered by independent bond rating agencies, or through independent analysis conducted by an advisor, to be sufficient to ensure timely payment of principal and interest under current economic circumstances. Below investment-grade securities, which include bonds commonly known as "junk bonds," have lower credit quality ratings.

- *Municipal Bonds* are generally issued by state and local governments, agencies, or other governmental authorities (collectively, “municipalities”) to support their needs or finance public projects. In some cases, municipal bonds may be issued to provide funding for a third party permitted to use the proceeds, such as an airport or a hospital. The interest payable on municipal bonds is generally exempt from federal income taxes and, in some cases, from state and local taxes. Municipal bonds can be broadly categorized into general obligation bonds and revenue bonds, although a wide variety of municipal bond structures can exist within these categories. General obligation bonds are secured by the full faith, credit, and taxing power of the issuer. This means that the interest and principal payable on a general obligation bond does not need to come from a particular source. By contrast, a revenue bond’s principal and interest payments are payable only from the revenue generated or derived from the underlying project. Conduit bonds are revenue bonds issued by municipalities in order to provide funding for a third party. It is the third party, not the issuing municipality, who is responsible for payments of interest and principal on a conduit bond.

More on Fund Risks

Investing in the securities markets can result in a loss of principal. The Fund is subject to a variety of risks, including the principal risks listed below, that can impact its net asset value (NAV), performance, and ability to achieve its investment objective.

More on Principal Risks

General Market Risk. The markets in which the Fund invests can be affected by a variety of factors. These factors, which can be real or perceived, may include economic, market, political, and regulatory conditions and developments as well as local, regional, or global events such as wars, military conflicts, natural disasters, and public health issues. In addition, investor sentiment and expectations regarding these factors can also impact the markets. Different parts of the market, including different industries and sectors as well as different types of securities, may react differently to factors that affect the market. These factors can contribute to market uncertainty, market volatility, and fluctuations in the value of the Fund’s investments, thereby resulting in potential losses to the Fund over short or long periods.

Investing in Bond Markets. The Fund may be impacted by the general condition of the bond markets and by factors that affect bonds and bond issuers. For example, as a general rule, bond prices and interest rates move in opposite directions. When interest rates rise, bond prices tend to fall, and when interest rates fall, bond prices tend to go up. Bond income also is affected by

changes in interest rates. Interest rates can rise or fall for a number of reasons, including, but not limited to, central bank monetary policy, inflationary or deflationary pressures, and changes in general market and economic conditions. Changing interest rates, including, but not limited to, rates that fall below zero, could have unpredictable effects on the overall market and may expose the bond markets in particular to heightened volatility and potential illiquidity. The degree to which the Fund is impacted by the following bond market risks may vary based on factors disclosed throughout this Prospectus, such as the types of bonds in which it invests and the overall credit quality, average maturity, and/or average duration of its bond holdings.

Investing in the Municipal Bond Market. In addition to the general risks associated with bonds and the bond market, municipal bonds are subject to unique risks. The prices and yields of municipal bonds are highly dependent on the financial condition of municipal bond issuers (i.e., their ability to make principal and interest payments) and the overall condition of the municipal bond market. As a result, the values of the Fund's municipal bond holdings could be impacted significantly by economic, regulatory, political, or other developments or circumstances affecting municipal bond issuers. These developments or circumstances could include, but are not limited to, rulings by governmental authorities regarding the tax-exempt status of municipal bond income, litigation against or bankruptcy declared by a municipal bond issuer, adverse economic conditions, or natural disasters, among others. Any of these circumstances could create uncertainty in the municipal bond market and/or adversely impact the ability of municipal bond issuers to make principal and interest payments, which could result in a loss to the Fund.

Revenue bonds make up a significant portion of the municipal bond market. Investing in revenue bonds will generally subject the Fund to a higher degree of **Credit Risk** and greater sensitivity to adverse economic conditions than investing in general obligation bonds. In addition, investing in conduit bonds, which are a special type of revenue bond issued by a municipality but repaid by a third party, subjects the Fund to the credit risk of the third party as opposed to the credit risk of the issuing municipality.

The Fund also is subject to the risk that all or a significant portion of its municipal bond holdings will be affected in the same manner. Many municipal bonds are issued to finance similar projects, which means adverse conditions in sectors related to these projects could have an outsized impact on the municipal bond market and potentially on the Fund. For example, a fund that holds a significant number of municipal bonds issued to build hospitals can be expected to be affected by developments in the health care sector.

Tax-Exempt Income Risk. There is no guarantee that the interest payable on municipal bonds will remain exempt from federal, state, or local income taxes. Tax-exempt income from the Fund's municipal bond holdings could be declared taxable, possibly with retroactive effect, due to a variety of circumstances such as tax law changes, adverse interpretations by tax authorities, or noncompliant conduct by a municipal bond issuer. Any of these circumstances could cause the prices of municipal bonds to decline significantly or impair the Fund's ability to achieve its investment objective.

Interest Rate Risk. The Fund's investments in bonds can be sensitive to interest rate changes and may be affected differently depending on the overall interest rate environment. During periods of rising interest rates, bond prices overall may decline, which could result in a decline in the Fund's value. The prices of longer-term bonds are more sensitive to changes in interest rates than the prices of shorter-term bonds.

Income Risk. During periods of falling interest rates, the Fund's income may decline because the Fund may have to invest new cash flow and cash from maturing bonds in bonds with lower yields. The income paid by shorter-term bonds is subject to a higher degree of fluctuation than the income paid by longer-term bonds.

Credit Risk. Credit risk refers to the chance that an issuer will default (fail to meet its credit obligations) or fail to make payments in a timely manner, which could result in a loss to the Fund. In addition, negative perceptions of an issuer's ability to make payments can cause the price of a security to decline. While all debt securities are subject to credit risk to some extent, those with higher credit quality ratings generally pose less credit risk than those with lower credit quality ratings.

Municipal Bond Liquidity Risk. Limited trading in the municipal bond market and a relative lack of publicly available information about the financial condition of municipal bond issuers may make municipal bonds more difficult to value or sell than other types of debt securities. If the Fund is unable to sell a security at an advantageous time or price, its returns may be reduced.

Call Risk. Certain bonds held by the Fund may be callable. The issuer of a callable bond has the right to "call" (redeem) the bond before its maturity date. When a bond is called, the principal value of the bond is repaid earlier than anticipated (prepayment) and the investor (in this case, the Fund) no longer receives the interest payments that would have been paid up to the expected maturity date. In addition, bond calls and the resulting prepayments cause the Fund to lose any price appreciation that would have occurred between the time the bond was called and its original maturity date.

During periods of falling interest rates, it benefits issuers to call bonds with high interest rates. When this occurs, the Fund likely will be forced to reinvest the proceeds of any called bonds at a lower interest rate than that of the called bonds, resulting in a decline in the Fund's income and a potential loss in the value of the Fund's investments. If the proceeds from a called bond generate taxable income, the Fund may need to distribute income subject to federal or New York personal income tax or to the federal alternative minimum tax. If the Fund holds multiple callable bonds, frequent bond calls (as is likely during periods of falling interest rates) and the Fund's subsequent reinvestment of the proceeds also would increase the Fund's turnover rate.

Extension Risk. During periods of rising interest rates, certain bonds held by the Fund may be paid off substantially more slowly than originally anticipated. As a result, the value of the bonds may fall, resulting in a decline in the Fund's income and a potential loss in the value of the Fund's investments.

State-Specific Focus. The Fund invests primarily in securities issued by New York and its municipalities. Any adverse tax, legislative, or political developments in New York may have far-reaching impacts on the overall New York municipal bond market, which could adversely affect the Fund's holdings and/or the securities that are available for investment by the Fund. In addition, the Fund is more susceptible to the credit risk of and unfavorable developments in New York than a fund that invests more widely. Unfavorable developments in any economic sector may have far-reaching ramifications on the overall New York municipal bond market.

Index Investing. The Fund is subject to the following risks associated with index investing:

Passive Management. The Fund seeks to track the performance of its Target Index regardless of how the Target Index is performing. The advisor's use of an indexing, or passive, approach to select and maintain investments for the Fund means that the advisor will select investments for the purpose of tracking the Target Index and generally will not use strategies to reduce negative impacts to the Fund during periods of market volatility. As a result, the Fund's performance may be lower than it would be if it were actively managed.

Index Sampling Strategy. Because the Fund does not hold all of the securities included in its Target Index, it is subject to the risk that the representative sample of securities selected by the advisor will, in the aggregate, vary from the investment profile of the full Target Index.

Tracking Error. The performance of the Fund's investments, in the aggregate, may not match the investment performance of its Target Index. It is important to understand that an index fund will never perform exactly the same as its target

index because, among other things, an index fund has operating expenses and transaction costs and its target index does not. Beyond these inherent differences in the operation of an index fund versus the operation of its target index, there are a variety of other factors that can cause or result in tracking error. These may include, but are not limited to:

- Price differences between the securities held by the index fund and those included in its target index
- Cash flows into or out of the index fund
- The size of the index fund
- Compliance with new or existing regulatory requirements
- Portfolio transactions carried out by the index fund's advisor to minimize the distribution of capital gains
- Changes to the underlying securities that make up the target index
- Errors made by the provider of the target index

Tracking error risk may be heightened during times of increased market volatility or under other unusual market conditions. An index fund using a sampling strategy may be more likely to experience tracking error than an index fund using a replicating strategy.

Index Provider. The Fund is subject to risks associated with its index provider. The securities that make up the Target Index and their weighting in the Target Index are determined by the index provider. The index provider does not provide any warranty or accept any liability with respect to the quality, accuracy, or completeness of the Target Index or any data used to compile the Target Index. Under normal circumstances, the index provider rebalances (updates) the Target Index on a regular schedule. However, the index provider may also rebalance the Target Index outside of the regular schedule or delay or cancel a scheduled rebalance, which could result in added costs for the Fund or cause the Fund to experience tracking error. The index provider may make errors, and it is possible that such errors may not be identified by the index provider for a period of time or at all. Any gains, losses, or costs associated with or resulting from an error made by the index provider will generally be borne by the Fund and, as a result, the Fund's shareholders. The Fund's advisor does not provide any warranty or guarantee against any errors made by the index provider.

Nondiversified Funds. The Fund is considered a nondiversified fund as defined under the Investment Company Act of 1940. Nondiversified funds invest a greater percentage of their assets in a small number of issuers than diversified funds, their performance may be negatively impacted by relatively few securities or even a single security, and their shares may experience significant fluctuations in value.

ETF Share Trading. Because ETF shares trade on the secondary markets, they are subject to the following risks:

ETF Shares Trading at Prices Other Than NAV. ETF shares may trade on a national securities exchange at prices above, below, or at their most recent NAV. The NAV of the Fund's ETF shares, which typically is calculated at the end of each business day, will generally fluctuate with changes in the market value of the Fund's holdings. The market prices of ETF shares will also fluctuate, in some cases materially, in accordance with changes in NAV and the intraday value of the Fund's holdings, as well as the relative supply of and demand for the ETF shares on an exchange. Differences between secondary market prices of ETF shares and the intraday value of the Fund's holdings may be due largely to supply and demand forces in the secondary market, which may not be the same forces as those influencing prices for securities held by the Fund at a particular time.

Although it is expected that the market price of an ETF share typically will trade close to the value of the Fund's holdings, market prices are not expected to correlate exactly to the Fund's NAV due to timing reasons, supply and demand imbalances, and other factors. In addition, disruptions to creations and redemptions; adverse developments impacting market makers, authorized participants, or other market participants; or high market volatility may result in the market price of ETF shares differing significantly from the Fund's NAV or the intraday value of the Fund's holdings. As a result of these factors, among others, you may pay more (premium) or less (discount) than NAV when you buy ETF shares on the secondary market, and you may receive more or less than NAV when you sell those shares. These discounts and premiums are likely to be greatest during times of market disruption or extreme market volatility.

Cost of Buying or Selling Shares. Individual investors who buy or sell ETF shares through a broker may incur a brokerage commission or other charges imposed by brokers. In addition, the market price of ETF shares, like the price of any security on an exchange, includes a "bid-ask spread" charged by the market makers or other participants that trade the particular security. The bid-ask spread is the difference between the highest price a buyer is willing to pay to purchase ETF shares (bid) and the lowest price a seller is willing to accept for ETF shares (ask) when buying or selling shares in the secondary market. The bid-ask spread of the Fund's ETF shares can vary over time based on the Fund's trading volume and market liquidity and may increase if the Fund's trading volume, the bid-ask spread of the Fund's underlying securities, or market liquidity decrease. In times of severe market disruption, including when trading of the Fund's holdings may be halted, the bid-ask spread may increase significantly. This means that ETF shares may trade at a discount to the Fund's NAV, and the discount is likely to be greatest during significant market volatility.

Short Selling. ETF shares, similar to shares of other issuers listed on an exchange, may be sold short. In a short sale, an investor “borrows” securities from a lender for a fee and then sells the borrowed securities on the open market with the hope that the borrowed securities decline in price before the investor has to repurchase the securities to return them to the lender. Short sales of ETF shares can increase their volatility and lead to price decreases.

Lack of Active Trading Market. Although ETF shares are listed on a national securities exchange, it is possible that an active trading market may not be maintained. Although this could happen at any time, it is more likely to occur during times of severe market disruption. If you attempt to sell your ETF shares when an active trading market is not functioning, you may have to sell at a significant discount to NAV. In extreme cases, you may not be able to sell your shares at all.

Trading Halt. Trading of ETF shares on an exchange may be halted by the activation of individual or market-wide trading halts (which halt trading for a specific period of time when the price of a particular security or overall market prices decline by a specified percentage). Trading of ETF shares may also be halted if (1) the shares are delisted from the listing exchange without first being listed on another exchange or (2) exchange officials determine that such action is appropriate in the interest of a fair and orderly market or for the protection of investors. If a trading halt or unanticipated early closing of an exchange occurs, a shareholder may be unable to purchase or sell ETF shares.

Authorized Participants. Only Authorized Participants may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of financial institutions that may act as Authorized Participants. The Fund’s Authorized Participants are not obligated to engage in creation or redemption transactions. To the extent that the Fund’s Authorized Participants are unable to or choose not to proceed with creation and/or redemption transactions with respect to the Fund and no other Authorized Participants step forward to engage in creation or redemption transactions with the Fund, the Fund’s ETF shares may trade at a discount to NAV and possibly face trading halts and/or delisting.

Additional Risks

Geopolitical and Sanctions Risk. Due to growing dependencies between global economies, geopolitical events can negatively affect all securities, markets, and economies. It is possible that events which only impact one geographic area could have negative short- or long-term effects on markets, issuers, and/or exchanges in the United States and other countries.

At times, the United States, other governments, or other supranational bodies (e.g., the United Nations) may impose sanctions on countries and/or entities in response to geopolitical events or other priorities. Compliance with sanctions could impact the Fund, including the Fund's ability to transact in or obtain exposure to certain foreign securities and assets. Sanctions also could cause significant losses to the Fund's investments and its performance could be negatively impacted. In lieu of sanctions, companies or specific goods that the company produces could be subjected to trade embargoes or tariffs, which can also affect securities markets and create volatility. So long as sanctions do not prohibit investment in the company or issuer, the Fund typically also would not be prohibited from investing in the affected company or issuer.

Potential Redemption Activity Impacts. The Vanguard funds can be negatively impacted by certain large redemptions. These redemptions could occur due to a single shareholder or multiple shareholders deciding to sell a large quantity of shares of a fund or a share class of the fund. Large redemptions can occur for many reasons, either as a result of actions taken by the Vanguard funds or their advisors, or as a result of events unrelated to actions taken by the Vanguard funds or their advisors. Actions taken by the Vanguard funds or their advisors could include, but are not limited to, changes to a fund's advisor(s), changes to a fund's portfolio manager(s), changes to the composition of a fund's portfolio, and/or other product changes or launches that, for example, result in shareholders redeeming shares of one fund to purchase shares of another fund or investment vehicle. For a fund of funds, actions taken by the Vanguard funds or their advisors could include a withdrawal from an underlying fund or a change in the allocation to underlying funds. Events unrelated to actions taken by the Vanguard funds or their advisors could include shareholders selling out of a fund in response to market movements or regulatory changes.

A large redemption could adversely affect a fund's liquidity and NAV. For example, a large redemption could require a fund's manager to sell portfolio holdings at unplanned or inopportune times. The manager's sale of these holdings, which is a taxable event, could require the fund to distribute any corresponding capital gains or other taxable income to the fund's remaining shareholders; see *Dividends, Distributions, and Taxes* in the **Investing in Vanguard ETF® Shares** section for additional information. The increased trading activity could also increase underlying costs for the fund due to commissions paid by the fund.

Large Shareholder Risk. From time to time, certain shareholders (or one shareholder) may hold a substantial portion of the Fund's net assets. There can be no assurance that a large shareholder will maintain its investment in the

Fund. A redemption of such a shareholder's investment in the Fund could result in, for example, an increase in the Fund's transaction costs or expense ratio or the realization of taxable capital gains. See **Potential Redemption Activity Impacts**.

Investing in Derivatives. Investing in derivatives may present risks different from, and/or greater than, those associated with investing directly in stocks, bonds, or other types of investments. Derivatives could expose the Fund to increased volatility and/or significant loss. Certain derivatives have an inherent leverage component, providing the Fund exposure to a sizable position in an underlying asset with a relatively small upfront investment at the time the Fund enters into the derivatives position. For these derivatives, an adverse change in the value or price of the underlying asset could result in a loss substantially greater than the amount invested in the derivative itself. Some derivatives require the Fund to enter into a contract with a counterparty. If the counterparty is unable or unwilling to fulfill its contractual obligation, the Fund may experience a loss. A liquid market may not always exist for the Fund's derivatives positions. The Fund may be unable to sell or otherwise exit its derivatives position at desired times or prices, which could also result in a loss to the Fund. Some derivatives, particularly OTC derivatives, can be complex and often are valued subjectively. Valuation may be more difficult in times of market turmoil since many investors and market makers may be reluctant to purchase complex instruments or quote prices for them. Improper valuations can result in increased cash payment requirements to counterparties or a loss of value to the Fund.

Derivatives may not perform as intended, which may result in losses to the Fund. For example, derivatives used for hedging or as a substitute for a portfolio instrument may not provide the expected benefits, particularly during adverse market conditions. The use of derivatives is also subject to legal risk, which includes the risk of loss resulting from insufficient or unenforceable contractual documentation, insufficient capacity or authority of the Fund's counterparty, and operational risk, which includes documentation or settlement issues, system failures, inadequate controls, and human error.

Other Investment Policies

In addition to employing its principal investment strategies, the Fund may use the following other investment strategies and types of investments in order to achieve its investment objective.

Substitute Index

The Fund reserves the right to substitute a different index for the index it currently tracks if the current index is discontinued, if the Fund's agreement with the provider of its Target Index is terminated, or for any other reason determined in good faith by the Board. In any such instance, the substitute index would represent the same market segment as the Target Index.

Other Types of Investments

Some of the following investments may generate taxable income. As a result, the Fund may need to distribute income subject to federal or New York personal income tax or to the federal AMT.

Up to 20% of the Fund's assets may be used to purchase 144A securities, which are nonpublic, investment-grade securities exempt from registration requirements under Rule 144A of the Securities Act of 1933, as well as smaller public issues or medium-term notes not included in the Fund's Target Index because of the small size of the issue. The vast majority of such securities will have characteristics and risks similar to the bonds included in the Fund's Target Index. Subject to the same 20% limit, the Fund may also purchase other investments that are not included in its Target Index (such as those described below) or may hold bonds that were included in the Target Index when acquired but subsequently have been removed.

The Fund may purchase tax-exempt securities on a "when-issued" basis. When investing in "when-issued" securities, the Fund agrees to buy the securities at a certain price on a certain date, even if the market price of the securities at the time of delivery is higher or lower than the agreed-upon purchase price.

The Fund may invest in municipal bond structured products that, in the opinion of the Fund's advisor, are consistent with the Fund's investment objective. Such investments may include tender option bond programs or long-term municipal securities with a demand feature (e.g., variable rate demand obligations or notes). Certain issuers of structured products may be deemed to be investment companies as defined in the Investment Company Act of 1940. As a result, the Fund's investments in these products may be limited under Rule 12d1-4 of the 1940 Act, which is designed to limit the use of complex fund structures. A description of the municipal bond structured products in which the Fund may invest is provided below.

Tender option bond programs are a type of municipal bond structured product that allows the purchaser to receive a variable rate of tax-exempt income from a trust entity that holds long-term municipal bonds.

Variable rate demand notes or "VRDNs" are structured products that combine long-term bonds with a demand feature. An investment in a VRDN represents

the right to sell the instrument back to the remarketer or liquidity provider (usually a bank) for repurchase on short notice (normally one day or seven days).

The Fund may invest in derivatives. In general, a derivative is a financial contract whose value is based on the value of a financial asset (such as a stock, a bond, or a currency), a physical asset (such as gold, oil, or wheat), a market index, or a reference rate. The Fund may invest in derivatives only if the expected risks and rewards of the derivatives are consistent with the investment objective, policies, strategies, and risks of the Fund as disclosed in this Prospectus. In particular, derivatives will be used only when they may help the advisor accomplish one or more of the following:

- Invest in eligible asset classes with greater efficiency and lower cost than is possible through direct investment.
- Add value when these instruments are favorably priced.
- Adjust sensitivity to changes in interest rates.

The Fund's investments in derivatives may include fixed income futures contracts, fixed income options, interest rate swaps, total return swaps, credit default swaps, or other derivatives.

The Fund may invest a small portion of its assets in shares of exchange-traded funds (ETFs). These ETFs typically provide returns similar to those of bonds listed in the index, or in a subset of the index, the Fund seeks to track. The Fund may purchase ETFs when doing so will reduce the Fund's transaction costs, facilitate cash management, mitigate risk, or have the potential to add value because the instruments are favorably priced. Vanguard receives no additional revenue from Fund assets invested in ETF shares of other Vanguard funds. Fund assets invested in ETF shares of other Vanguard funds are excluded when allocating to the Fund its share of the costs of Vanguard's operations.

Cash Management

The Fund's daily cash balance may be invested in one or more Vanguard CMT Funds, which are used as cash management vehicles for the Vanguard funds. When investing in a CMT Fund, the Fund bears its proportionate share of the expenses of the CMT Fund in which it invests. Vanguard receives no additional revenue from Fund assets invested in a CMT Fund. Investment in a CMT Fund may generate taxable income for the Fund and potentially may require the Fund to distribute income subject to federal or New York personal income tax or to the federal AMT.

Temporary Defensive Measures

The Fund may temporarily depart from its normal investment policies and strategies when the advisor believes that doing so is in the Fund's best interest, so long as the strategy or policy employed is consistent with the Fund's investment objective. For instance, the Fund may invest beyond its normal limits in derivatives or exchange-traded funds that are consistent with the Fund's investment objective when those instruments are favorably priced or provide needed liquidity, as might be the case when the Fund receives large cash flows that it cannot prudently invest immediately. By temporarily departing from its normal investment policies, the Fund may distribute income subject to federal or New York personal income tax or the federal AMT and may otherwise fail to meet its investment objective.

Portfolio Holdings

Please consult the Fund's *Statement of Additional Information* or Vanguard's website for a description of the policies and procedures that govern disclosure of the Fund's portfolio holdings.

Management and Distribution of the Fund

The Fund is a member of The Vanguard Group, Inc. (Vanguard), a family of over 200 funds. All of the funds that are members of Vanguard (other than funds of funds) share in the expenses associated with administrative services and business operations, such as personnel, office space, and equipment.

Vanguard Marketing Corporation provides marketing services to the funds. Although fund shareholders do not pay sales commissions or 12b-1 distribution fees, each fund (other than a fund of funds) or each share class of a fund (in the case of a fund with multiple share classes) pays its allocated share of the Vanguard funds' marketing costs.

How is Vanguard's Corporate Structure Unique?

Vanguard is owned jointly by the funds it oversees and thus indirectly by the shareholders in those funds. Most other mutual funds are operated by management companies that are owned by third parties—either public or private stockholders—and not by the funds they serve.

Investment Advisor

The Vanguard Group, Inc., P.O. Box 2600, Valley Forge, PA 19482, which began operations in 1975, serves as advisor to the Fund through Vanguard Capital Management (VCM). VCM exercises portfolio management responsibilities for the Fund. As of November 30, 2025, Vanguard served as

advisor for approximately \$9.9 trillion in assets. Vanguard, through VCM, provides investment advisory services to the Fund pursuant to the Funds' Service Agreement and an intercompany service agreement between Vanguard and VCM, subject to the supervision and oversight of the trustees and officers of the Fund.

VCM, P.O. Box 2600, Valley Forge, PA 19482, is a wholly owned subsidiary of Vanguard and was established in 2025.

For the fiscal year ended November 30, 2025, the advisory expenses represented an effective annual rate of less than 0.01% of the Fund's average net assets.

The Fund reserves the right to utilize a multimanager approach in the future. Under the terms of an SEC exemption, the Board may, without prior approval from shareholders, change the terms of an advisory agreement with a third-party investment advisor or hire a new third-party investment advisor—either as a replacement for an existing advisor or as an additional advisor. Any significant change in the Fund's advisory arrangement will be communicated to shareholders in writing. As Vanguard is the Fund's sponsor and overall manager, Vanguard, through VCM, may provide investment advisory services to the Fund under certain circumstances. Vanguard may also recommend to the Board that an advisor be hired, terminated, or replaced or that the terms of an existing advisory agreement be revised. The Fund has filed an application seeking an SEC exemption with respect to investment advisors that are wholly owned subsidiaries of Vanguard. If the exemption is granted, the Fund may rely on the new SEC relief.

A discussion regarding the basis for the Board's approval of the Fund's investment advisory arrangement is available in the Fund's Form N-CSR filed with the SEC for the fiscal year ended November 30 and in the applicable Financial Statements and Other Information document available on the Fund's website.

The manager primarily responsible for the day-to-day management of the Fund is:

Justin A. Schwartz, CFA, Principal of Vanguard, Portfolio Manager at VCM, and head of Money Markets and Municipal Index. He has been with Vanguard and worked in investment management since 2004, has managed investment portfolios since 2010, and has managed the Fund since its inception in 2025. Education: B.S., University of Richmond.

The Fund's *Statement of Additional Information* provides information about the portfolio manager's compensation, other accounts under management, and ownership of shares of the Fund.

Investing in Vanguard ETF[®] Shares

The Fund's ETF shares are listed for trading on Cboe BZX Exchange, Inc. You can buy and sell ETF shares on the secondary market in the same way you buy and sell any other exchange-traded security—through a broker. Your broker may charge a commission to execute a transaction. Unless imposed by your broker, there is no minimum dollar amount you must invest and no minimum number of ETF shares you must buy.

Your ownership of ETF shares will be shown on the records of the broker through which you hold the shares. Vanguard will not have any record of your ownership. Your account information will be maintained by your broker, which will provide you with account statements, confirmations of your purchases and sales of ETF shares, and tax information. Your broker also will be responsible for ensuring that you receive income and capital gains distributions, as well as shareholder reports and other communications from the fund whose ETF shares you own. You will receive other services (e.g., dividend reinvestment and average cost information) only if your broker offers these services.

Redemption of ETF Shares by Authorized Participants

Unlike conventional (i.e., not exchange-traded) mutual fund shares, ETF shares cannot be purchased directly from or redeemed directly with the issuing fund by an individual investor. Instead, only Authorized Participants can purchase and redeem ETF shares directly from the issuing fund. Authorized Participants may purchase and redeem ETF shares from the issuing fund only in large blocks (creation units), usually in exchange for baskets of securities. Funds may also issue and redeem creation units in exchange for solely cash or a combination of cash and securities. These trades may occur in-kind between Vanguard and the Authorized Participant. If cash is used to meet redemptions, the Fund typically obtains such cash through positive cash flows or the sale of Fund holdings consistent with the Fund's investment objective and strategy.

Under certain circumstances, including under stressed market conditions, the Fund may borrow money (subject to certain regulatory conditions and if available under board-approved procedures) through an interfund lending facility; through a bank line-of-credit, including a joint committed credit facility; or through an uncommitted line-of-credit from Vanguard in order to meet redemption requests.

Pricing of Fund Shares

ETF shares may only be bought and sold in the secondary market. The price you pay or receive for the ETF shares will be the prevailing market price, which may be more or less than the Fund's NAV. Your transaction will be priced at the NAV only if you purchase or redeem your ETF shares in creation unit blocks (an

option available only to certain authorized broker-dealers). NAV is typically calculated as of the close of regular trading on the New York Stock Exchange ("NYSE"), generally 4 p.m., Eastern time, on each day that the NYSE is open for business (a business day). In the rare event the NYSE experiences unanticipated disruptions and is unavailable at the close of the trading day, NAVs will be calculated as of the close of regular trading on the Nasdaq (or another alternate exchange if the Nasdaq is unavailable, as determined at Vanguard's discretion), generally 4 p.m., Eastern time. The time selected for NAV calculation in this rare event generally shall also serve as the conclusion of the trading day. On U.S. holidays or other days when the NYSE is closed, the NAV is not calculated, and the Vanguard funds do not sell or redeem shares. However, on those days the value of a fund's assets may be affected to the extent that the fund holds securities that change in value on those days (such as foreign securities that trade on foreign markets that are open).

If a fund only has one share class, the NAV per share is computed by dividing the total assets, minus liabilities, of a fund by the number of fund shares outstanding. If a fund has more than one share class, each share class has its own NAV, which is computed by dividing the total assets, minus liabilities, allocated to the share class by the number of fund shares outstanding for that class. The value of securities and other investments held by the Vanguard funds is determined pursuant to the valuation policies and procedures adopted by the Vanguard funds' boards of trustees. Vanguard has been designated as the valuation designee for the Vanguard funds pursuant to Rule 2a-5 under the Investment Company Act of 1940, subject to oversight by the Vanguard funds' boards of trustees.

Securities for which market quotations are readily available are valued at their market value, based on quotations provided by independent third-party pricing sources. Such securities are generally valued at their official closing price, the last reported sales price, or if there were no sales that day, the mean between the closing bid and asking prices, from the principal exchange or market on which they are traded. A fund's investments in any mutual fund shares, including institutional money market fund shares, are valued at the NAVs of the mutual fund shares. A fund's investments in any ETF shares or closed-end fund shares are valued at the market value of those shares.

When the market quotations are not readily available or do not accurately reflect the value of a security or other investment, such security or other investment is priced at fair value, generally based on information provided by independent third-party pricing services, in accordance with the valuation policies and procedures adopted by the Vanguard funds' boards of trustees. Fair value represents a good faith determination of the value of a fund's investments. The fair value of a security or other investment is the amount that the owner might reasonably expect to receive upon the current sale of the security or other investment. Fair-value pricing may require subjective

determinations. It is possible that the price determined through fair-value pricing may differ from the price quoted or published by other sources and may not be the price at which those investments could have been sold during the period in which the fair value was used.

Fair-value pricing may be used in a variety of circumstances. For example, it may be used if the value of a security or other investment has been materially affected by events occurring after the close of the principal exchange or market on which the security is traded but before the funds' NAV is calculated. These events might be company-specific (e.g., earnings report, merger announcement), country-specific (e.g., significant price movements in U.S. or a foreign market), or regional/global events (e.g., natural disaster, economic or political news, interest rate change, act of terrorism). These events could affect a single security or a large number of securities in a particular market, and it most commonly occurs with foreign portfolio holdings because many foreign markets operate at times that do not coincide with those of the major U.S. markets. Events that could affect the value of the foreign portfolio holdings may occur between the close of the foreign market and the time a fund's NAV is calculated. The values of any foreign securities held by a fund are converted into U.S. dollars using an exchange rate obtained from an independent third party as of the close of regular trading on the NYSE.

In addition, fair-value pricing may be used if trading in a security is halted and does not resume before a fund's pricing time, a security does not trade in the course of a day and a fund holds enough of the security that its price could affect the NAV, or if the trading market on which a security is listed is suspended or closed and no appropriate alternative trading market is available.

Fixed income securities are generally valued based on information furnished by independent pricing services and are priced at fair value. Pricing services may use matrix pricing or valuation models that utilize certain inputs and assumptions to derive values. Pricing services generally value fixed income securities assuming orderly transactions of an institutional round lot size, but a fund may hold or transact in such securities in smaller odd lot sizes. Odd lots may trade at lower prices than institutional round lots.

Failures by third-party pricing services to carry out their obligations to the Vanguard funds (e.g., any errors in the data provided by third-party pricing services) could result in delays in the calculation of the funds' NAVs and/or the inability to calculate the NAVs over extended time periods. The funds may be unable to recover any losses associated with such failures.

The Vanguard funds have authorized certain financial intermediaries and their designees, and may, from time to time, authorize certain funds of funds for which Vanguard serves as the investment advisor (Vanguard Funds of Funds), to accept orders to purchase or redeem fund shares on behalf of the Vanguard funds. In these circumstances, the Vanguard fund will be deemed to receive an

order when accepted by the authorized financial intermediary, its designee, or one of the Vanguard Funds of Funds, and the order will be executed using the NAV next calculated after such acceptance.

Vanguard's website will show the previous day's closing NAV and closing market price for a fund's ETF shares. The website also discloses, in the Premium/Discount analysis section of a fund's Price and Performance page, how frequently the fund traded at a premium or discount to NAV (based on closing NAVs and market prices) and the magnitudes of such premiums and discounts.

Dividends, Distributions, and Taxes

Fund Distributions

The Fund generally distributes to shareholders virtually all of its net income (interest less expenses) as well as any net short-term or long-term capital gains realized from the sale of its holdings. The Fund may also make distributions that are treated as a return of capital. Income dividends are generally declared monthly and distributed as soon as practicable thereafter; capital gains distributions, if any, generally occur annually in December and distributed as soon as practicable thereafter. In addition, the Fund may make one or more supplemental distributions at other times during the year.

From time to time, Vanguard and/or a fund's board of trustees may adjust a fund's fees and expenses and/or reduce, refund, reimburse, waive, or otherwise return to the funds and their shareholders a portion of prior fees and expenses (collectively, "expense adjustments"). Fund performance and potentially shareholder distributions, will reflect such expense adjustments. If you sell all or part of your investment in a fund before an expense adjustment occurs, then you will not receive the economic benefit, if any, of such expense adjustment. An expense adjustment at any given time does not imply or guarantee that similar or additional expense adjustments will be made in the future.

Reinvestment of Distributions

In order to reinvest dividend and capital gains distributions, investors in the Fund's ETF shares must hold their shares at a broker that offers a reinvestment service. This can be the broker's own service or a service made available by a third party, such as the broker's outside clearing firm or the Depository Trust Company (DTC). If a reinvestment service is available, distributions of income and capital gains can automatically be reinvested in additional whole and fractional ETF shares of the Fund. If a reinvestment service is not available, investors will receive their distributions in cash. To determine whether a reinvestment service is available and whether there is a commission or other charge for using this service, consult your broker.

As with all exchange-traded funds, reinvestment of dividend and capital gains distributions in additional ETF shares will occur two business days or more after the ex-dividend date (the date when a distribution of dividends or capital gains is deducted from the price of the Fund's shares). The exact number of days depends on your broker. During that time, the amount of your distribution will not be invested in the Fund and therefore will not share in the Fund's income, gains, and losses.

Basic Tax Points

A majority of the income dividends that you receive are expected to be exempt from federal and New York state income taxes. In addition, investors in taxable accounts should be aware of the following basic federal income tax points:

- Distributions of capital gains and any investment income that is not exempt from federal income tax are taxable to you whether or not you reinvest these amounts in additional Fund shares.
- Distributions declared and recorded in December—if paid to you by the end of January—are generally taxable as if received in December.
- Any short-term capital gains distribution that you receive is taxable to you as ordinary income.
- Any distribution of net long-term capital gains is taxable to you as long-term capital gains, no matter how long you have owned shares in the Fund.
- Capital gains distributions can occur when the Fund sells assets at a gain. Capital gains distributions vary from year to year as a result of the Fund's investment activities and cash flows, including those due to redemption activity by Fund shareholders.
- Capital gains distributions may occur if Vanguard, the Fund, or its advisor makes changes that would impact the Fund directly or indirectly, including changes to the Fund's portfolio or advisors or changes to any other Vanguard fund or product that would involve the redemption of shares of the Fund and the related sale of the Fund's investments. Such changes could, depending on the timing, result in capital gains distributions in the current fiscal year, subsequent fiscal year, or both.
- Your cost basis in the Fund will be decreased by the amount of any return of capital that you receive. This, in turn, will affect the amount of any capital gain or loss that you realize when selling your Fund shares.
- Return of capital distributions generally are not taxable to you until your cost basis has been reduced to zero. If your cost basis is at zero, return of capital distributions will be treated as capital gains.
- Exempt-interest dividends from a tax-exempt fund are taken into account in determining the taxable portion of any Social Security or railroad retirement benefits that you receive.

- Income paid from tax-exempt bonds whose proceeds are used to fund private, for-profit organizations may be subject to the federal alternative minimum tax.
- A sale of Fund shares is a taxable event. This means that you may have a capital gain to report as income, or a capital loss to report as a deduction, when you complete your tax return.
- If you purchase shares before an ex-dividend date when a fund has realized but not yet distributed income or capital gains, the purchase price may include the amount of the upcoming distribution, and you may pay the full price for the shares and later receive a portion of the purchase price back as a taxable distribution. In such case, you generally will be taxed upon receipt of such distribution, even though the distribution effectively represents a return of a portion of your purchase price. This is known as “buying a dividend.”

Individuals, trusts, and estates whose income exceeds certain threshold amounts are subject to a 3.8% Medicare contribution tax on “net investment income.” Net investment income takes into account distributions paid by the Fund (except exempt-interest dividends) and capital gains from any sale of Fund shares.

Income dividends and capital gains distributions that you receive, as well as your gains or losses from any sale of Fund shares, may be subject to state and local income taxes.

Income dividends from interest earned on municipal securities of a state or its political subdivisions are generally exempt from that state’s income taxes. Almost all states, however, tax interest earned on municipal securities of *other* states. Vanguard (or your intermediary) will annually provide you with information to help report your earnings by state from the Fund on your annual tax returns.

This Prospectus provides general tax information only. Please consult your own tax advisor for detailed information about any tax consequences for you.

Frequent Trading Limitations

Unlike frequent trading of a Vanguard fund’s conventional share classes, frequent trading of ETF shares generally does not disrupt portfolio management or otherwise harm fund shareholders. The vast majority of trading in ETF shares occurs on the secondary market. Because these trades do not involve the issuing fund, they do not pose potential harm to the fund or its shareholders. Certain broker-dealers are authorized to purchase and redeem ETF shares directly with the issuing fund. Because these trades typically are effected in kind (i.e., for securities and not for cash), or are assessed a transaction fee when effected in cash, they do not cause any of the harmful effects to the issuing fund (as previously noted) that may result from frequent trading. For these reasons,

the boards of trustees of Vanguard funds that issue ETF shares have determined that it is not necessary to adopt policies and procedures to detect and deter frequent trading and market-timing of ETF shares.

Financial Highlights

Financial highlights information is intended to help you understand a fund's performance for the past five years (or, if shorter, its period of operations). Certain information reflects financial results for a single fund share. Total return represents the rate that an investor would have earned or lost each period on an investment in a fund or share class (assuming reinvestment of all distributions). This information has been obtained from the financial statements audited by PricewaterhouseCoopers LLP, an independent registered public accounting firm, whose report, along with fund financial statements, is included in a fund's most recent annual or semi-annual report Financial Statements and Other Information. You may obtain a free copy of a fund's latest disclosure documents upon request.

Vanguard New York Tax-Exempt Bond ETF

For a Share Outstanding Throughout Each Period	May 20, 2025 ¹ to November 30, 2025
Net Asset Value, Beginning of Period	\$100.00
Investment Operations	
Net Investment Income ²	1.975

Net Assets, End of Period (Millions)	\$163
Ratio of Total Expenses to Average Net Assets	0.10% ^{3,4,5}
Ratio of Net Investment Income to Average Net Assets	3.63% ³
Portfolio Turnover Rate	6% ⁶

1 Inception.

2 Calculated based on average shares outstanding.

3 Annualized.

4 The ratio of expenses to average net assets for the period net of reduction from custody fee offset arrangements was 0.09%.

5 Vanguard and the board of trustees have agreed to temporarily assume certain expenses (representing an annual rate of 0.08% of the fund's average net assets) to maintain a total expense ratio of 0.09%. The fund will not be required to reimburse Vanguard for these amounts.

6 Excludes the value of portfolio securities received or delivered as a result of in-kind purchases or redemptions of the fund's capital shares, including ETF Creation Units.

Additional Information

A Precautionary Note to Investment Companies. The Fund's ETF shares are issued by a registered investment company, and therefore the acquisition of such shares by other investment companies and private funds is subject to the restrictions of Section 12(d)(1) of the Investment Company Act of 1940 (the 1940 Act). SEC Rule 12d1-4 under the 1940 Act permits registered investment companies to invest in other registered investment companies beyond the limits in Section 12(d)(1), subject to certain conditions, including that funds with different investment advisors must enter into a fund of funds investment agreement.

Forum Selection. The Trust's Bylaws designate Delaware courts as the exclusive forum for certain claims against or related to the Trust, a trustee, an officer, or other employee of the Trust, except that, unless the Trust otherwise consents in writing, the U.S. Federal District Courts are the exclusive forum for the resolution of complaints under the Securities Act of 1933 or the 1940 Act. These provisions may limit a shareholder's ability to bring a claim in a different forum and may result in increased shareholder costs in pursuing such a claim.

Shareholder Rights. The Fund's Agreement and Declaration of Trust, as amended, requires a shareholder bringing a derivative action on behalf of the Trust that is subject to a pre-suit demand to collectively hold at least 10% of the outstanding shares of the Trust or at least 10% of the outstanding shares of the series or class to which the demand relates and to undertake to reimburse the Trust for the expense of any counsel or advisors used when considering the merits of the demand in the event that the board of trustees determines not to bring such action. In each case, these requirements do not apply to claims arising under the federal securities laws to the extent that any such federal securities laws, rules, or regulations do not permit such application. The Trust's Bylaws also provide that shareholders waive the right to trial by jury to the fullest extent permitted by law.

Joint Committed Credit Facility. The Fund participates, along with other funds managed by Vanguard, in a committed credit facility provided by a syndicate of lenders pursuant to a credit agreement that may be renewed annually; each Vanguard fund is individually liable for its borrowings, if any, under the credit facility. The amount and terms of the committed credit facility are subject to approval by the Board and renegotiation with the lender syndicate on an annual basis.

Certain affiliates of the Fund and the advisor may purchase and resell ETF shares pursuant to this Prospectus.

Vanguard Fund	Inception Date	Vanguard Fund Number	CUSIP Number
Vanguard New York Tax-Exempt Bond ETF	5/20/2025	V046	92204H400

Inception Date means the date on which the assets of a fund (or one of its share classes) are first invested in accordance with the fund's investment objective. For funds with a subscription period, the inception date is the day after that period ends. Investment performance is generally measured from the inception date.
